Canadian Association of Social Workers - 2018

This statement was originally written and released by the [CANADIAN PSYCHOLOGICAL ASSOCIATION](#). The Canadian Association of Social Workers reprints and adapts the original statement with permission.

Founded in 1926, the Canadian Association of Social Workers (CASW) is the national association voice for the social work profession.

The mission of CASW is to promote the profession of social work in Canada and advance social justice. CASW is active in the International Federation of Social Workers (IFSW).

This statement was developed and released by the Canadian Psychological Association (CPA) and is reprinted here with CPA's permission. The Canadian Association of Social Workers (CASW) unreservedly endorses and accepts this position as its own. The reader can insert "the Canadian Association of Social Workers for the "Canadian Psychological Association" any time it appears in the statement.

The Canadian Psychological Association opposes any therapy with the goal of repairing or converting an individual's sexual orientation, regardless of age. Conversion therapy, or reparative therapy, refers to any formal therapeutic attempt to change the sexual orientation of bisexual, gay and lesbian individuals to heterosexual (e.g., Nicolosi, 1991; Socarides & Kaufman, 1994). It can include prayer or religious rites, modification of behaviours, and individual or group counselling (Bright, 2004; Nicolosi, 1991).

Scientific research does not support the efficacy of conversion or reparative therapy (Haldeman, 1994; Spitzer, 2012; see Anton, 2010). Conversion or reparative therapy can result in negative outcomes such as distress, anxiety, depression, negative self-image, a feeling of personal failure, difficulty sustaining relationships, and sexual dysfunction (e.g., Haldeman, 2001; Shidlo & Schroeder, 2002; Beckstead & Morrow, 2004; Glassgold et al., 2009). There is no evidence that the negative effects of conversion or reparative therapy counterbalance any distress caused by the social stigma and prejudice these individuals may experience.

The Canadian Psychological Association also recognizes that individuals differ in the fluidity of their sexual attractions across the lifespan (Rust, 1993; Spitzer, 2003; Diamond, 2007), but does not view such naturally occurring fluidity as supporting arguments in favour of conversion or reparative therapies. As well, individuals may experience distress about their non-heterosexual attractions or orientation, due to negative internalized beliefs or external factors such as family, religious, or societal values or discrimination (e.g., Bartlett, Smith, & King, 2009; Beckstead, 2012; Beckstead & Morrow, 2004). As such, seeking therapy from an LGB-affirmative or person-focused therapist is a positive step towards maintaining one's mental health (see Anton, 2010; Beckstead 2012).
